**Production:**

MARViTECH GmbH  
Bornmühlenstraße 14  
17033 Neubrandenburg  
Germany

As managing director of GTA-Sensorik, Dr. Friedrich Fabry has developed the Marvin seed grain analysis system over the last 20 years into one of the world's leading analytical instruments for seeds. Every year, our customers test and document more than 1 million samples with the Marvin analyzer. The precision of the instrument as well as the customer-specific versions have provided our customers worldwide with a high degree of security when growing their seeds.

Mr. Thomas Stumpe, managing director of MARViTECH GmbH, has been active in various branches of process measurement technology for more than 20 years and has the corresponding experience. Dr. Fabry will be available to MARViTECH as advisor in the coming months and will ensure a smooth transition.

MARViTECH will continue to be a partner of seed breeders. The special aspect is the further development of the optical analysis in order to provide the seed growers with even more data on the characteristics of the seeds.

In addition to seed analysis, environmental measurement technology will also be an important area at MARViTECH to provide our customers with MORE certainty, precision and safety in seed breeding.

We would like to thank you for the many years of cooperation and look forward to the future with you.

Dr. Friedrich Fabry  
Managing Director GTA Sensorik GmbH

Thomas Stumpe  
Managing Director MARViTECH GmbH

Business handover in hanover at 30.01.2019
